- 1. Business Requirement – US01**
- 2. Functional Requirement – TTS01**
- 3. Functional Requirement - TTS02**

## 1. Business Requirement – US01

### Description:

A desktop application is required for a library, enabling the management of users, administrators, books, and loans.

The system will have three main roles: super administrator, administrator, and user.

The super administrator will be able to register new administrators. Administrators will be able to register users and books, manage loans, and configure system settings such as loan duration, fine amounts, the logo, and the visual theme colors.

The system should also display a dashboard upon login, showing statistics such as the most borrowed book and the most active user.

## 2. Functional Requirement – TTS01

### ID: TTS01 Description:

Design the prototype of the system's graphical user interface, including the main screens: login, dashboard, user registration, book registration, and navigation menu. This prototype will be presented to the client for validation before starting the code development.

**Priority:** P1 (High)

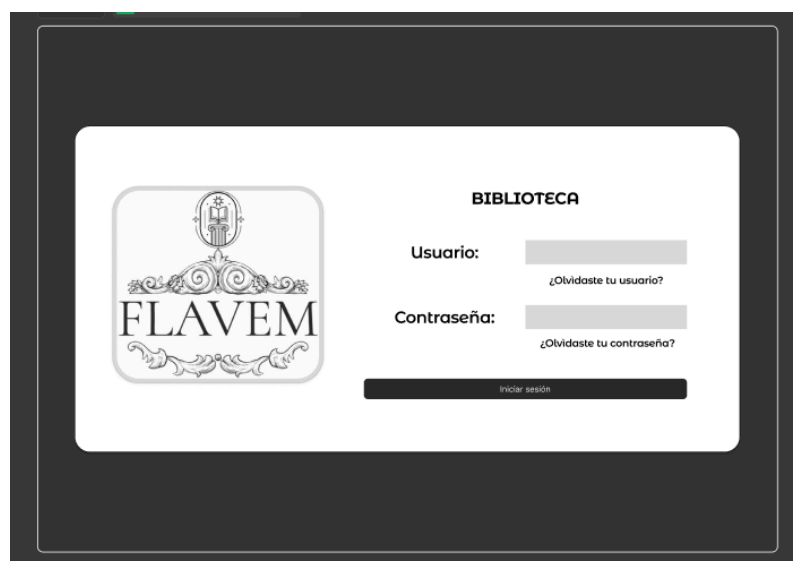

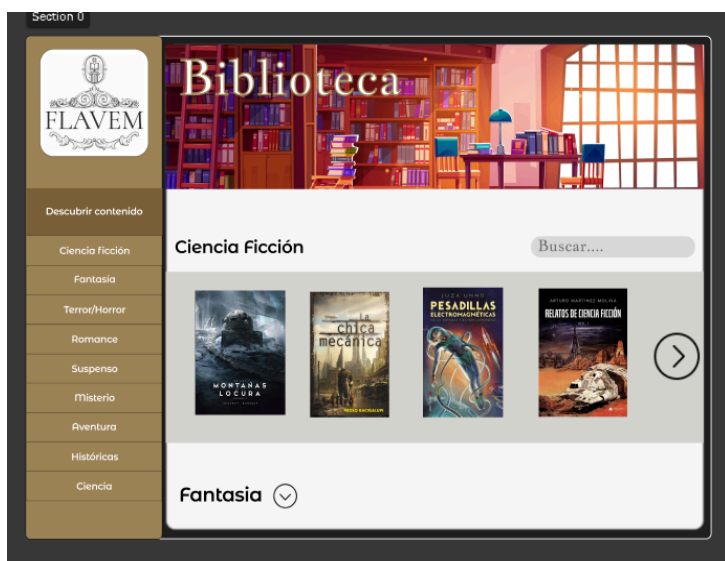

**Status:** To Do

**ID:** TT01

### Description (updated):

The prototype of the system's graphical interface was designed, including the main screens.

**Status:** Done

### 3. Functional Requirement – TTS02

**ID:** TTS02

**Description:**

Develop the login functionality for the system. The screen must include username and password fields. Upon login, the system will verify the credentials against the database and redirect the user based on their role:

**Superadmin** will access the Superadmin dashboard.

**Admin** will access the Admin dashboard.

If credentials are invalid, an error message should be displayed. The visual design of the login screen must follow the approved prototype in TT01.

**Priority:** P1 (High)

**Status:** To Do

### 4. Functional Requirement – TTS03

**ID:** TTS03

**Description:**

Develop the functionality that allows the Superadmin to register new Administrators. This module must include:

A form with the following fields:

- Full name (String).
  - Email address (String).
  - Phone number (String).
  - Profile photo (Image, optional webcam capture).
1. The form must be only accessible by the Superadmin after login.
  2. Data must be validated (e.g., no empty fields, valid email format).
  3. Store the data in the system's database.
  4. If a camera is available, allow taking a photo at the moment of registration.

**Priority:** P1 (High)

**Status:** To Do
